Easy
Step-by-Step
Instructions

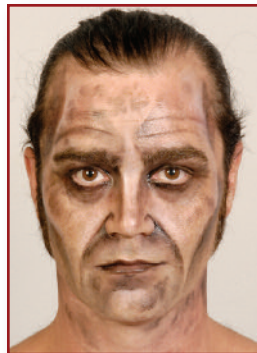

Step 1 – Make sure your face is clean and dry.

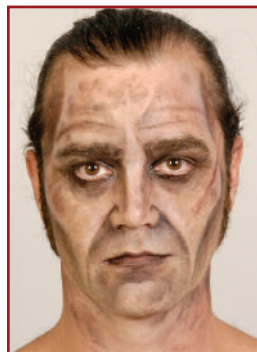

Step 2 – Using your sponge applicator, put black on the temples and blend toward the hairline. Define the cheekbones blending down. Bring the cheekbone line down to given appearance of sunken in cheeks. Add black to the eyelids and the area between the eyes and the eyebrows. Add black to the sides of the nose to thin the nose, blending it towards the cheeks. Blend the nose area into the area between the eyes and eyebrows. With an upward motion, add black to the area between the eyebrows, not connecting the eyebrows. Add black below the nasal labia fold and blend down.

Step 3 – Add black just below the lip. Using the other side of the sponge applicator, add white highlights to cheekbones, nasal labia fold, top of the nose, chin and temples.

Step 4 – Using black, color the lips and shade in under the eyes. Add some crows feet and forehead crease lines. Using your finger dipped in black, smudge black make up on the face to give the appearance of dirty and unbathed.

Step 5 - Use the applicator to add a red scar or two. Using the powder puff, powder the face to set the make up and keep it from coming off. Option: You can add stitch marks to the scar. For a more realistic effect leave off the stitches.

Step 6 – Dry teeth off with a tissue. Apply the TOOTH FX onto the teeth. Apply TOOTH FX with a clean qtip if more than one person will be wearing the TOOTH FX.
